

## **HOW TO CARE FOR YOUR GENUINE HYUNDAI PAINT PROTECTION FILM**

Congratulations on your purchase of Genuine Hyundai Paint Protection Film. This film is made up of a polyurethane material topped with a clear-coat layer to exhibit a paint-like gloss. It requires special care and maintenance in order to maintain its glossy finish, overall look, and performance. The following items must be considered when cleaning and maintaining the Genuine Hyundai Paint Protection Film.

### **Care and Maintenance:**

1. Dust and wax the film regularly to prevent dirt build up around the edges and to maintain its glossy finish.
2. Use a liquid-based car wash soap, extra-soft sponge, and water to wash your Hyundai Paint Protection Film.
3. When using a high-pressure water hose to wash, keep at least 36" away from your film's edges and surface.
4. Wipe down with a clean and dust-free chamois and/or micro-fiber drying towel.
5. Wax only with non-abrasive waxes or polishes. Carnuba or Teflon based is recommended.
6. Use a small toothpick to softly remove any wax build-up around the edges.

### **Do not do the following:**

1. **Do not** use a powder-based detergent or degreaser to clean your film.
2. **Do not** use any abrasive scrubbers and/or sponges. Do not rub excessively or use excessive force when cleaning or drying.
3. **Do not** use any abrasive or hard-compound waxes and/or polishes.
4. **Do not** use any clay products to clean the surface of your film.
5. **Do not** use a high-speed power buffer or polishing equipment.
6. **Do not** pick the Paint Protection Film's edges. Once the material is lifted it will not lay back down properly without damage.
7. **Do not** use a high-pressure hose closer than 36" from the Paint Protection Film surface.
